

ACADEMIC INTERESTS

3D Machine Learning, Neural Rendering, Physically Based Rendering, High Performance Computing

EDUCATION

- **Korea Advanced Institute of Science and Technology, KAIST** Daejeon, South Korea
Bachelor of Science in Computer Science & Electrical Engineering Mar. 2019 – Present

OPEN SOURCE PROJECTS

- **IllustRay**: Physcially-based path tracer written in C++/CUDA
- **ray-tracing-in-one-weekend-cpp**: C++/CUDA implementation of basic ray tracer based on the book *Ray Tracing in One Weekend* by Peter Shirley
- **torch-gqn**: Pytorch implementation of Generative Query Network proposed in *Neural scene representation and rendering* (Eslami et al., Science 2018)
- **torch-pointnet**: Pytorch implementation of *PointNet* (Charles R. Q et al., CVPR 2017)
- **GrandTheftAutopilot**: Project aiming at building an autonomous driving system in GTA V. (in charge of developing vision system for object detection and classification in real time using YOLO)

PROGRAMMING SKILLS

- **Languages**: C, C++, Python
- **Deep Learning Frameworks**: Pytorch, Tensorflow
- **Software Development Tools**: Git, and CIs

SCHOLARSHIPS AND ACHIEVEMENTS

- **Presidential Scholarship, Korea Student Aid Foundation (KOSAF)**: 2019 – Present
- **Dean's List, KAIST College of Engineering**: Spring 2020, Fall 2020
- **Merit-based Scholarship, KAIST College of Engineering**: Fall 2020
